

HENOK "HENNY" YARED

Software Engineer | Backend & Full-Stack Systems | Fintech Infrastructure
Minneapolis, MN | (612) 489-3912 | henok.yared.dev@gmail.com | henokyared.com
github.com/Henysha | linkedin.com/in/henok-yared-777x

Summary

Software engineer focused on backend and full-stack financial systems: APIs, ledger-based balances, risk scoring, funding workflows, dashboards, and developer-facing platforms. Completed a production-style fintech portfolio spanning Java/Spring Boot, Python/FastAPI, NestJS/TypeScript, React, PostgreSQL, Docker, GitHub, CI/CD, and automated testing.

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, SQL
Backend: Spring Boot, FastAPI, NestJS, REST APIs, JWT authentication, service-layer architecture
Frontend: React, Vite, Tailwind CSS, responsive UI, protected routes
Data/DevOps: PostgreSQL, Prisma, SQLAlchemy, Spring Data JPA, Flyway, Docker, Docker Compose, GitHub, CI/CD
Testing/Fintech: Jest, pytest, Playwright, MockMvc, ledger modeling, idempotency, webhooks, funding workflows, risk scoring

Projects

NebirroAPI - Programmable Financial Infrastructure Platform | github.com/Henysha/NebirroApi

- Built a programmable financial infrastructure API for trusted capital networks using NestJS, TypeScript, PostgreSQL, Prisma, Docker, React, Jest, Playwright, and a TypeScript SDK.
- Implemented partner API keys, wallets, ledger-derived balances, transfers, idempotency protection, webhooks, Swagger docs, React dashboard, E2E tests, and CI.

TrustGraph Engine - Explainable Risk, Fraud, and Reputation Engine | github.com/Henysha/trustgraph-engine

- Built an explainable fintech risk and fraud platform using FastAPI, PostgreSQL, SQLAlchemy, Docker, React TypeScript, pytest, and Playwright.
- Implemented deterministic scoring for users, groups, and transactions with risk levels, decision recommendations, fraud alerts, review cases, API tests, E2E UI tests, and CI.

CapitalCircle - Community Capital & Pooled Finance Platform | github.com/Henysha/capital-circle

- Built a full-stack community finance platform using Java Spring Boot, React TypeScript, PostgreSQL, Docker, JWT, Swagger/OpenAPI, Flyway, and integration tests.
- Implemented pooled savings groups, contributions, funding requests, approvals, and transparent CREDIT/DEBIT ledger-based balances.

Education

University of St. Thomas - M.S. Software Engineering

May 2026 | GPA: 3.37

University of Minnesota - B.S. Chemistry

December 2017

Professional Experience

Self-employed - Freelance Web Developer

June 2026 - Present

- Build responsive websites for small business and professional clients, handling site planning, page structure, responsive UI, content organization, deployment, and post-launch improvements.
- Use modern web workflows with React, TypeScript, Tailwind CSS, GitHub, and Vercel to deliver polished mobile and desktop sites.

Amazon - Fulfillment Operations

November 2022 - Present

- Support fulfillment operations in a high-volume warehouse environment requiring reliability, attention to detail, speed, communication, and consistent execution.
- Balanced operations work with graduate software engineering coursework and independent software projects.

TradeFast Corp - Founder

August 2017 - February 2021

- Founded and operated a commerce venture focused on device resale, service delivery, customer relationships, and business development; managed pricing, sourcing, communication, and day-to-day operations.

Beckman Coulter Diagnostics - Senior Technical Quality Control

October 2020 - August 2021

- Performed technical quality control work with process accuracy, documentation, 5S, and Kanban-style workflows in a regulated production environment.

3M - Laboratory Technical Aide

March 2016 - November 2018

- Supported research and development lab operations including testing, documentation, sample preparation, equipment use, and process execution.
