Henok "Henny" Yared Junior Software Engineer

Minneapolis, MN • henok.yared.dev@gmail.com • (612) 489-3912 • linkedin.com/in/henok-yared-777x • github.com/Henysha • henokyared.com

Profile Summary

• **Junior Software Engineer** with hands-on experience building full-stack fintech platforms including a programmable finance **API**, an explainable risk and fraud engine, and a pooled finance system.

• Focused on **backend and full-stack financial systems** covering **ledger-based balances**, **risk scoring**, and **funding workflows**, using **service-layer architecture**, **idempotency protection**, and **webhook integration**.

• Broad toolkit spanning backend **frameworks** (**Spring Boot**, **FastAPI**, **NestJS**), frontend (**React**, **Vite**, **Tailwind CSS**), data stores (**PostgreSQL**, **Prisma**), and testing (**Jest**, **pytest**, **Playwright**).

• **AI**-assisted engineer who uses **Cursor** and **GitHub Copilot** for rapid prototyping, debugging, testing, refactoring, and documentation while independently validating the resulting code.

• Engaged **collaborator** and **proactive team** player who works directly with small-business and professional clients to plan sites, organize content, and ship polished mobile and desktop experiences, founded and ran a commerce venture, completed an **M.S. in Software Engineering in May 2026**, and stays reliable and detail-focused under pressure.

Technical Skills

Programming Languages: Java, Python, TypeScript, JavaScript, C++, SQL, HTML5, CSS3, Rust (foundational)
Back-End & APIs: Spring Boot, FastAPI, NestJS, Node.js, Express.js, REST APIs, GraphQL, JWT, OAuth concepts, role-based access control, webhooks, idempotency, Swagger/OpenAPI
Front-End: React, Angular, Next.js, Nuxt.js, Vite, Tailwind CSS, Redux, Zustand, React Query, SWR, responsive design, semantic HTML, accessibility fundamentals
Databases & Data Access: PostgreSQL, MySQL, MongoDB, Prisma, SQLAlchemy, Spring Data JPA, Flyway, Alembic, H2
Cloud, DevOps, Testing & Quality: AWS (Athena, S3), Microsoft Azure, Docker, Docker Compose, Git, GitHub, GitHub Actions, Azure DevOps, Jenkins, Vercel, Netlify, CI/CD, Jest, pytest, Playwright, Cypress, Selenium, Puppeteer, Mocha, Jasmine, MockMvc, Supertest, FastAPI TestClient, Postman, Lighthouse, axe DevTools
Visualization, Design & Enterprise Tools: Power BI, Tableau, Excel, Recharts, D3.js, Figma, Excalidraw, Microsoft Power Platform, Dynamics 365, ETL workflows
AI-Assisted Engineering & Additional Technologies: Cursor, GitHub Copilot, prompt engineering, LLM-assisted development, rapid prototyping, AI-assisted debugging, refactoring, testing, documentation, Solidity, EVM concepts, zkSync ZK Stack, smart-contract development, Rust-based systems concepts
Ways of Working & Certification: Agile, Scrum, Kanban, 5S, cross-functional collaboration, Certified Scrum Product Owner (CSPO), September 2024

Work Experience

Self-employed

Minneapolis, MN

Freelance Web Developer

Jun. 2026 - Present

• Built responsive mobile and desktop websites for freelance clients, including **Benu Cuts** for ***Akway's Sports Barbershop*** in **Eagan**, **MN**, ***Berukti Hair Braiding***, ***CMCI Ministries*** in ***Burnsville***, **MN**, and other small businesses and professionals, using **React**, **TypeScript**, and **Tailwind CSS** for architecture, development, and deployment.

• Met directly with clients to understand their business, brand, services, content, and desired customer experience, translating requirements into site structure and design while aligning recommendations to business strategy and adapting communication to each client's technical literacy.

• Planned site architecture and page structure by defining navigation structure, page/section hierarchy, **URL** paths, and reusable shared and page-specific **UI** components, while mapping navigation flows and page relationships during pre-development planning.

• Designed responsive **React** interfaces with **Tailwind** breakpoint utilities and mobile-first **CSS**, applying typographic scale, spacing, clear calls to action, **DRY principles**, reusable component composition, separation of concerns, and performance-conscious rendering practices across mobile and desktop experiences.

• Applied **React** hooks, local state, controlled components, predictable updates, and shared state through component props, streamlining component synchronization and reducing state-change bugs, while supporting accessible interfaces with **semantic HTML**, alt text, form labels, readable contrast, and responsive layouts.

• Validated client sites with manual functional, responsive, navigation, content, and browser testing, deployed production builds to **Vercel** through automatic **Git** deployments, and managed post launch content and layout changes through **Git** based **Vercel** redeployments.

• Connected the **React/TypeScript** frontend for **Berukti Hair Braiding** to the **Cal.com API** using **Axios** to support appointment availability and online booking.

Amazon
Shakopee, MN

Fulfillment Operations
Nov. 2023 - Present

• Managed warehouse fulfillment with handheld scanners and warehouse management systems, meeting productivity, quality, and throughput targets while completing graduate software engineering coursework and independent projects.

• Collaborated with cross functional teams across inbound, picking, packing, ship dock, and stow, coordinating associates, process assistants, and area managers to meet safety, quality, throughput, and order accuracy standards.

TradeFast Corp
Burnsville, MN

Founder
Aug. 2017 - Feb. 2021

• Founded and ran a device resale and service venture, sourcing devices from wholesale suppliers, online auctions, and marketplaces, managing inventory, and pricing devices using condition grades and comparable market listings.

• Delivered device diagnostics and repair, data transfer, setup, and customer support alongside device sales, generating **$300** average revenue per transaction with **$80**-**$100** average profit.

• Managed customer communication through **SMS, phone,** and **online marketplace messaging**, handling complaints, exchanges, troubleshooting, and dispute resolution while expanding through customer referrals, online marketplace listings, and recurring supplier relationships to support repeat and referral business.

• Directed daily operations through **inventory tracking** and **order-fulfillment workflows**, managing per-unit margin tracking and expense control while coordinating sourcing, preparation, sale, and fulfillment.

Beckman Coulter Diagnostics
Chaska, MN

Senior Technical Quality Control
Oct. 2020 - Aug. 2021

• Executed technical quality control in a regulated production environment, using **SOP**s and work instructions, reviewing quality records and incoming inspection, and maintaining **5S** and **Kanban**-style workflows.

3M
Maplewood, MN

Laboratory Technical Aide
Mar. 2016 - Nov. 2018

Software Projects

NebirroAPI - Programmable Financial Infrastructure Platform
Jul. 2026

• Built a programmable financial infrastructure **API** for capital networks with **React**, **NestJS**, **TypeScript**, **PostgreSQL**, and **Prisma**, adding **REST** endpoints, token authentication, role based access control, audit logs, transfers, idempotency protection, **Swagger** documentation, **webhook**s, and a **TypeScript SDK** for reliable transactions.

• Designed a **React** dashboard using **React hooks**, local state, **React Router**, and **Axios**, presenting dashboard cards and tables for balances, ledger entries, transfers, and webhook events.

• Implemented **automated testing** and deployment workflows by running unit and **E2E** tests with **Jest** and **Playwright**, containerizing the application with **Docker**, and automating builds in **CI**.

TrustGraph Engine - Explainable Risk, Fraud, and Reputation Engine
Jul. 2026

• Designed an explainable fintech risk and fraud platform with deterministic scoring for users, groups, and transactions, covering risk levels, decision recommendations, fraud alerts, and review cases

• Developed the **TrustGraph Engine** full stack, building a **React TypeScript** user interface alongside a **FastAPI** backend that modeled and queried a **PostgreSQL** database using **SQLAlchemy**. Conducted **API** and end-to-end UI tests using **pytest** and **Playwright**, while containerizing the application with **Docker** and automating builds in **CI**.

CapitalCircle - Community Capital & Pooled Finance Platform
Jul. 2026

• Developed a full-stack community finance platform with pooled savings groups, contributions, funding requests, approvals, and transparent **CREDIT/DEBIT** ledger-based balance, with **React** and **TypeScript**.

• Built the backend **API** with **Java Spring Boot** documented via **Swagger/OpenAPI**, modeled the **PostgreSQL** database with **Flyway** schema versioning, secured platform access with **JWT authentication**, and containerized the app via **Docker**.

Education

University of St. Thomas M. Sc. in Software Engineering — St. Paul, MN • 2019 - May 2026

University of Minnesota B. Sc. in Chemistry — Minneapolis, MN • 2013 - Dec. 2017
