

HENOK "HENNY" YARED

Software Engineer | Backend & Full-Stack Systems | Fintech Infrastructure
Minneapolis, MN | (612) 489-3912 | henok.yared.dev@gmail.com | henokyared.com
github.com/Henysha | linkedin.com/in/henok-yared-777x

Summary

Software engineer focused on practical financial systems: backend APIs, ledger-based balances, risk scoring engines, funding workflows, and full-stack dashboards. Project experience spans Java/Spring Boot, Python/FastAPI, NestJS/TypeScript, React, PostgreSQL, Docker, GitHub Actions, and automated testing across APIs, wallets, ledgers, fraud/risk workflows, and community finance platforms.

Technical Skills

Languages:	Java, Python, TypeScript, JavaScript, SQL
Backend:	Spring Boot, FastAPI, NestJS, REST APIs, JWT authentication, service-layer architecture
Frontend:	React, Vite, Tailwind CSS, responsive UI, protected routes
Data/DevOps:	PostgreSQL, Prisma, SQLAlchemy, Spring Data JPA, Flyway, Docker, Docker Compose, GitHub Actions, CI/CD
Testing/Fintech:	Jest, pytest, Playwright, MockMvc, ledger modeling, idempotency, webhooks, funding workflows, risk scoring

Projects

NebirroAPI - Programmable Financial Infrastructure Platform | github.com/Henysha/NebirroApi

- Built a programmable financial infrastructure platform for trusted capital networks using NestJS, TypeScript, PostgreSQL, Prisma, Docker, React TypeScript, and a TypeScript SDK.
- Implemented partner API keys, customer wallets, ledger-derived balances, wallet funding, transfers, idempotency protection, webhook events, Swagger docs, integration tests, demo scripts, Playwright E2E testing, and GitHub Actions CI.

TrustGraph Engine - Explainable Risk, Fraud, and Reputation Engine | github.com/Henysha/trustgraph-engine

- Built an explainable fintech risk and fraud platform using FastAPI, PostgreSQL, SQLAlchemy, Docker, React TypeScript, pytest, and Playwright.
- Implemented deterministic risk scoring for users, groups, and transactions with LOW/MEDIUM/HIGH levels, APPROVE/REVIEW/BLOCK recommendations, fraud alerts, review cases, API tests, demo scripts, E2E UI tests, and CI.

CapitalCircle - Community Capital & Pooled Finance Platform | github.com/Henysha/capital-circle

- Built a full-stack community finance platform using Java Spring Boot, React TypeScript, PostgreSQL, Docker, and JWT authentication.
- Implemented pooled savings groups, contributions, funding requests, admin approval flows, and a transparent ledger where contributions create CREDIT entries and approved disbursements create DEBIT entries; added Swagger/OpenAPI docs, Flyway migrations, service-layer rules, Spring Boot integration tests, and CI.

Education

University of St. Thomas - M.S. Software Engineering

May 2026 | GPA: 3.37

University of Minnesota - B.S. Chemistry

December 2017

Professional Experience

Amazon - IT Support / Operations Technology

2022 - Present

- Provide Tier I technical support in a fast-paced operations environment, troubleshooting Windows workstations, scanners, printers, mobile devices, account access, password resets, and ticket-based technical issues.
- Support associates and managers by diagnosing blockers quickly, communicating clearly, and strengthening reliability-focused problem solving.

Bio-Techne - Lab Assistant

June 2025 - September 2025

- Supported regulated laboratory workflows involving blood handling, centrifuge operations, standards preparation, and quality-focused sample processing.

Beckman Coulter - Senior Technical Quality Control

October 2020 - August 2021

- Performed technical quality control work in a production environment with attention to process accuracy, documentation, 5S, and Kanban-style workflows.
